

1. Verify the package contents.

6. Place the case cover back on the computer system. Reattach the power to the Computer System and power ON the system.

2. Turn off Computer System, unplug power and remove the cover of the Computer System

7. Once the Computer is powered ON, proceed to install the necessary drivers.
NOTE: If you are using Windows 8/8.1/10, your system will automatically detect the device and install the necessary drivers for you, you do not have to use the CD to start the manual Installation process.

3. Locate a free PCIe expansion slot and remove the metal L bracket cover plate

8. Insert the provided CD and browse to the Folder "UGT-PCE470-2C" for Dual Chip card for the setup program.

4. Insert the USB 3.1 expansion card into the PCIe slot, be sure to fasten the bracket as documented in the computer case manufacturer's documentation.

9. Run the Setup.exe program to start the Installation program. When the installation is done, select "Finish".

5. Connect the SATA Power OR Molex Power from the system power supply to this expansion card.

10. Your device is now ready for use.
